

| Key Word            | Definition |
|---------------------|------------|
| Scalar              |            |
| Vector              |            |
| Displacement        |            |
| Instantaneous speed |            |
| Average speed       |            |
| Velocity            |            |
| Acceleration        |            |
| Newton              |            |
| Weight              |            |
| Terminal velocity   |            |
| Centre of gravity   |            |
| Torque of a couple  |            |
| Moment of force     |            |

| Key Word                  | Definition |
|---------------------------|------------|
| Thinking distance         |            |
| Braking distance          |            |
| Stopping distance         |            |
| Work done                 |            |
| Joule                     |            |
| Conservation of energy    |            |
| Power                     |            |
| Watt                      |            |
| Stress                    |            |
| Strain                    |            |
| Young's modulus           |            |
| Ultimate tensile strength |            |
| Elastic deformation       |            |
| Plastic deformation       |            |
